USER INTERFACE DESIGN

Roll.No: 240701072 **Name: BARATH RAJ S P**

EXPERIMENT 6

Simulate the lifecycle stages for UI design using the RAD model

and develop a small interactive interface using Axure RP

AIM:

The aim is to demonstrate the lifecycle stages of UI design via the RAD model and develop a small interactive interface employing Axure RP.

PROCEDURE:

Simulating the Lifecycle Stages for UI Design Using the RAD Model

RAD Model (Rapid Application Development): The RAD model emphasizes quick

development and iteration. It consists of the following phases:

1. *Requirements Planning:*
    - Gather initial requirements and identify key features of the UI.

- Engage stakeholders to understand their needs and expectations.

2. *User Design:*

- Create initial prototypes and wireframes.
- Conduct user feedback sessions to refine the designs.
- Use tools like Axure RP to develop interactive prototypes.

3. *Construction:*

- Develop the actual UI based on the refined designs.
- Perform iterative testing and feedback cycles.

4. *Cutover:*

- Deploy the final UI.
- Conduct user training and support.

Axure RP Interactive Interface Development

Phase 1: Requirements Planning

1. *Identify Key Features:*

- Navigation (Home, Product Categories, Product Details, Cart, Checkout,
- Order Confirmation, Order History)
- User actions (Browsing, Searching, Adding to Cart, Checkout, Tracking Orders)

2. *Create a Requirements Document:*

- List all features and functionalities.
- Document user stories and use cases.

Phase 2: User Design

1. *Install and Launch Axure RP:*
    - Download and install Axure RP from Axure's official website.
    - Launch the application.
2. *Create a New Project:*
    - Go to File -> New to create a new project.
    - Name the project (e.g., "Shopping App Interface").
3. *Create Wireframes:*
    - Use the widget library to drag and drop elements onto the canvas.
    - Design wireframes for each screen:
        - Home Page
        - Product Categories
        - Product Listings
        - Product Details
        - Cart
        - Checkout
        - Order Confirmation
        - Order History
4. *Add Interactions:*
    - Select an element (e.g., button) and go to the Properties panel.
    - Click on Interactions and choose an interaction (e.g., OnClick).

- Define the action (e.g., navigate to another screen).

5. *Create Masters:*

    - Create reusable components (e.g., headers, footers) using Masters.
    - Drag and drop masters onto the wireframes.

6. *Add Annotations:*

    - Add notes to describe each element's purpose and functionality.
    - Use the Notes panel to add detailed annotations.

Phase 3: Construction

1. *Develop Interactive Prototypes:*

    - Convert wireframes into interactive prototypes by adding interactions and transitions..
    - Use dynamic panels to create interactive elements (e.g., carousels, pop-ups).

2. *Test and Iterate:*

    - Preview the prototype using the Preview button.
    - Gather feedback from users and stakeholders.
    - Make necessary adjustments based on feedback.

6. *Add Annotations:*

    - Add notes to describe each element's purpose and functionality.
    - Use the Notes panel to add detailed annotations.

Phase 4: Cutover

1. *Finalize and Export:*

    - Finalize the design and interactions.
    - Export the prototype as an HTML file or share it via Axure Cloud.

2. *User Training and Support:*

- Conduct training sessions to familiarize users with the new interface.
- Provide documentation and support for any issue

Product Details
• Name : Crisp English Cucumber
• Quantity : 1 pc (Approx 200g - 250g)
• Farm-to-Table : Selected and Harvested for Optimal Freshness
• Origin : Ethically sourced from local pesticide-free farms.
• Storage : Refrigerate immediately after purchase for crispness.
